

MASTER PROJECT BLUEPRINT

PROJECT NAME:

JobPortal Pro

PROJECT TYPE:

Full Stack Recruitment Platform

TECH STACK:

Frontend: React.js

Backend: Node.js + Express.js

Database: MongoDB + Mongoose

OBJECTIVE:

Build a professional full-stack Job Portal platform where recruiters can create and manage job postings while candidates can discover, search, filter, apply, and track job applications.

The application must feel like a real-world SaaS product rather than a student CRUD project.

CORE REQUIREMENTS

The application must support:

1. Job Management
 2. Candidate Applications
 3. Search Functionality
 4. Filter Functionality
 5. Sorting Functionality
 6. Pagination
 7. Application Dashboard
 8. Responsive Design
 9. Light Mode
 10. Dark Mode
 11. Loading States
 12. Empty States
 13. Validation
 14. Error Handling
-

DESIGN SYSTEM

Design Inspiration:

Modern SaaS Product

Visual Style:
BlackBucks Inspired

Primary Accent:
#A3C614

Hover Accent:
#8FB315

Background:
#F7F6EF

Cards:
#FFFFFF

Primary Text:
#111111

Secondary Text:
#666666

Borders:
#E5E5E5

Success:
#22C55E

Error:
#EF4444

Design Principles:

- Minimal Design
 - Premium Feel
 - Modern SaaS Appearance
 - Consistent Spacing
 - Reusable Components
 - Accessible Design
 - Responsive Layouts
-

LIGHT MODE

Background:
#F7F6EF

Cards:

#FFFFFF

Accent:

#A3C614

Text:

#111111

DARK MODE

Background:

#121212

Cards:

#1E1E1E

Accent:

#A3C614

Text:

#F7F6EF

Secondary Text:

#BDBDBD

Border:

#333333

Theme Requirements:

- Theme Toggle in Navbar
 - LocalStorage Persistence
 - Automatic Theme Restoration
 - Smooth Transition Animation
-

RESPONSIVE DESIGN

The entire application must follow a Mobile-First approach.

Desktop (1200px+)

Features:

- Multi-column Layout

- Sidebar Filters
- Expanded Navigation
- Full Job Details View

Tablet (768px - 1199px)

Features:

- Responsive Grid Layout
- Touch-Friendly Controls
- Adaptive Navigation
- Optimized Card Layouts

Mobile (320px - 767px)

Features:

- Single Column Layout
- Hamburger Menu
- Full Width Buttons
- Mobile Optimized Forms
- Stacked Components

All pages and components must be responsive.

APPLICATION PAGES

1. Home Page

Components:

- Navbar
 - Hero Section
 - Search Bar
 - Featured Jobs
 - Categories Section
 - Footer
-

2. Jobs Page

Display:

- Job Cards
- Search

- Filters
- Sorting
- Pagination

Each Card Must Show:

- Job Title
- Company Name
- Location
- Salary
- Job Type

Actions:

- View Details
 - Apply
-

3. Job Details Page

Display:

- Job Title
- Company
- Location
- Salary
- Job Type
- Description
- Responsibilities
- Requirements

Actions:

- Apply Now
 - Back To Jobs
-

4. Recruiter Dashboard

Features:

- Create Job
- Edit Job
- Delete Job
- View Applications

5. My Applications Page

Purpose:

Allow candidates to track all applied jobs.

Display:

- Total Applications
- Application History
- Recently Applied Jobs

Application Card Must Show:

- Job Title
- Company Name
- Location
- Job Type
- Applied Date

Search:

- Job Title
- Company Name

Filters:

- Full Time
- Part Time
- Contract
- Internship
- Remote

Sorting:

- Most Recent
- Oldest

Empty State:

"You haven't applied for any jobs yet."

JOB CREATION FORM

Fields:

- Job Title
- Company Name
- Location
- Salary
- Job Type
- Description

Validation:

- Required Fields
 - Salary Must Be Numeric
-

APPLICATION FORM

Fields:

- Full Name
- Email
- Phone Number

Validation:

- Required Fields
 - Valid Email
 - Valid Phone Number
-

SEARCH FUNCTIONALITY

Search By:

- Job Title
- Company Name

Implement real-time search.

FILTER FUNCTIONALITY

Job Types:

- Full Time

- Part Time
 - Contract
 - Internship
 - Remote
-

SORTING

Jobs:

- Latest
- Oldest
- Salary Low To High
- Salary High To Low
- Alphabetical

Applications:

- Most Recent
 - Oldest
-

PAGINATION

Implement:

- Previous Button
 - Next Button
 - Page Numbers
-

LOADING STATES

Implement:

- Loading Spinner
 - Skeleton Cards
 - Button Loading States
-

EMPTY STATES

Implement:

- No Jobs Found
 - No Applications Found
 - No Search Results
 - No Filter Results
-

ERROR HANDLING

Handle:

400 Bad Request

404 Not Found

500 Internal Server Error

Database Errors

Validation Errors

DATABASE DESIGN

Job Collection

Fields:

- title
- company
- location
- salary
- jobType
- description
- createdAt
- updatedAt

Application Collection

Fields:

- name
- email
- phone
- jobId
- appliedAt

Relationship:

One Job → Many Applications

API ENDPOINTS

Jobs

GET /api/jobs

POST /api/jobs

GET /api/jobs/:id

PUT /api/jobs/:id

DELETE /api/jobs/:id

Applications

POST /api/jobs/:id/apply

GET /api/jobs/:id/applications

GET /api/applications/user

CODING STANDARDS

Requirements:

- Clean Code
 - Reusable Components
 - MVC Architecture
 - Async/Await
 - Try/Catch Error Handling
 - Proper Comments
 - Consistent Naming Conventions
 - Responsive CSS
 - Modular Structure
 - Professional and complete code
 - Industrial level project
-

DELIVERABLES

Generate:

- Complete Frontend
- Complete Backend
- MongoDB Models
- Controllers

- Routes
- Middleware
- Validation
- Responsive UI
- Light Mode
- Dark Mode
- README.md
- Environment Variables
- Sample Data Seeder
- Professional Folder Structure

The final application should feel like a production-ready SaaS recruitment platform and not a simple internship CRUD assignment.
